If you find it hard to quickly navigate through a bunch of windows, this application could be the solution you've been looking for. This program can help you open new windows of the applications that are pinned to your taskbar. It also has an option to automatically pin your favorite windows to your taskbar. You can switch between windows by pressing the Winkey + Y shortcut key. No installation needed. FastWindowSwitcher is a free utility program that lets you open new windows of the programs that are pinned to your taskbar. It does not install any files and does not modify your system in any way. No registration is required and the program can be run directly from the executable. Features of FastWindowSwitcher include: Ability to open new windows of pinned applications Ability to open a new window of pinned application from the taskbar Ability to pin a window to your taskbar Ability to pin a window to your taskbar to your desktop Pin a window to your taskbar Pin a window to your taskbar to your desktop Open a new window of pinned application Open a new window of pinned application from the taskbar Close an opened window of pinned application Close an opened window of pinned application from the taskbar A window of an application can be closed by pressing the close button of the window or by right-clicking on the title bar of the window. If you press the Task Manager button, the program will automatically open it A window of an application can be closed by pressing the close button of the window or by right-clicking on the title bar of the window. If you press the Task Manager button, the program will automatically open it What's new in this version: There are no known problems for this version What's new in version 2.0.0: Modified the window switching method Modified the window closing method What's new in version 2.0.0.1: Added a new option to the configuration menu that allows you to pin the windows of pinned applications to your taskbar Fixed a minor issue with the default window switching method Fixed a minor issue with the configuration menu Fixed a minor issue with the window closing method What's new in version 2.1.0: Modified the window closing method What's new in version 2.

KeyMacro is a keyboard macro recorder for Windows. Unlike other similar applications, it is capable of recording and storing a set of keyboard shortcuts to be executed as a single, programmable keystroke, and later on, can even trigger them in a predefined order, using the mouse or hotkeys. A complete software development environment is provided, including a custom keyboard layout, a simplified user interface, and an intuitive way of creating macros. KeyMacro supports the common key combos used in a number of keyboard shortcuts, and is also fully customizable. Manage your macros: KeyMacro allows you to set up a "hotkey" or a "mouse macro", and use them to trigger predefined key sequences. You can also have multiple hotkeys or mouse macros, and easily toggle between them. You can set up the hotkey (or macro) to be executed whenever the program is not active, or in a pre-defined sequence. Create a macro: KeyMacro can be used to create new macros to be saved, copy them from one key combo to another, or use them as an easy way to execute custom key combinations. Macro creation is very easy and intuitive, and the available macros can be moved around or deleted, without losing the key sequences they contain. Customize your keyboard: KeyMacro allows you to add and rearrange your keyboard shortcuts to suit your needs. You can even create your own custom keyboard layouts that include a variety of hotkeys and macros for common scenarios. KeyMacro provides the necessary tools for creating your own custom keyboard layout: - Easy keyboard layout creation: Just drag and drop the keys and hotkeys you want, customize the key sequences, and make a layout file that can be saved and loaded to any computer. You can use the included blank layout for testing purposes, and later, add your own hotkeys and macros to it. - Easier key combination management: Create a macro for a specific set of keys, and then use them all by simply hitting the corresponding keys when you need to. You can also add hotkeys for common scenarios (launch a file, web browser, start a program, etc.), and use them to jump between different workstations or to execute common operations. - Fully customizable: In addition to keyboard shortcuts, the program also allows you to add custom hotkeys. Custom hotkeys can be set up to execute any arbitrary set of commands. KeyMacro allows you to use your mouse in conjunction with the hot 77a5ca646e

FastWindowSwitcher is a very useful application. It allows you to have a nice, easy way to navigate through a lot of windows on your computer. You can access it from the tray and just start it with a single click. You can pin a bunch of windows to the taskbar and switch between them. Its default shortcut is "Winkey + Y", but you can change it from the settings menu. This tool comes with very few options and they are very easy to understand. You can also close windows you don't need. It also comes with an option to pin the windows that you want to close to the taskbar. The application is free and has no advertisement, in-app purchases or any other kind of annoying stuff. Install the fastwindowswitcher.zip file to your computer by double-clicking it, after extracting it. Right-click it and then select "Run as Administrator" from the menu. If it asks you if you want to run it, select "Yes". When FastWindowSwitcher opens, you'll see its window in your taskbar. You can also find its icon in your tray. Click on it and select the option you want to configure. When the menu appears, you can pin a window to your taskbar, for easier switching, or you can create new ones by simply clicking the option "New Window". In the settings menu, you can choose from 3 or 4 different layouts. To change the hotkey for this app, go to the first tab and find the option "Window Switching Hotkey". Find the option that works for you, then select the hotkey and type it in the box. When you're done, click on "Ok". I'm glad that someone is actually listening to requests and wants to make an app like this. Much needed. One thing I'd really like to see is the ability to pin the windows to my taskbar. That's a huge plus over using Windows' native window switcher. And given how well this works, I'd bet that this is actually being used by some people already... This is the first app I've seen that is made for easy window switching. If I had to choose one to keep I'd go with FastWindowSwitcher but I know many like to be able to choose what windows are in the taskbar. I think that's where FastWindowSwitcher fails but it's still a good idea for

What's New In FastWindowSwitcher?

Instantly switch between open windows on your desktop Simple and easy to use Highly configurable Open windows from your taskbar, pin them to it, use keyboard shortcuts and more Keyboard shortcuts enable you to start a window in various ways Works in both Windows 7 and Windows 8 Homepage: Source: Download: Be sure to visit to keep up to date with all our new software releases!
